presents the

“Stonehenge”

*detailed, transparent, fast and coherent
with remarkable imaging and sound
staging qualities...*

Our designs employ intriguing shapes, uncommon materials and unique topologies with one goal in mind... to create products with a rare degree of musicality and performance. All our products are meticulously hand crafted and thoroughly tested.

The high efficiency and remarkable transient response found in the better loudspeaker systems of the 1940s and 50's is taken to a new level of refinement by the application of modern material, design and measurement technologies.

Our challenge is to produce state of the art loudspeaker systems with the inner detail, low distortion and coherence of the best electrostatic loudspeakers as well as the high efficiency, high power handling and neutral tonal balance of advanced dynamic drivers. We feel that all our designs comfortably meet these conflicting goals.

The “Stonehenge” is a compact floor-standing column loudspeaker using the same drivers as the “Model 1s”. Its model design, braced laminate construction and mirror-like gloss finish combine to create a true audio sculpture. The Stonehenge is also available in our less expensive sandstone finishes.

We use the most efficient, non-horn loaded drivers we can source in an unusual dual 10” 2way design. At 97db/w/m and a 30Hz bass roll off we have created a truly coherent and detailed full range, high efficiency loudspeaker system with the weight and authority of the live event.
